Features

- Cinema 3D with smart TV functions
- Passive battery-free 3D glasses
- Backlight: Edge LED (LED Plus)

Price: ₹ 134,990

High-end models always come at a premium price. It is good to remember that with the technology advancing, your TV will definitely lose some value in a few months. So there is no point spending extra over that latest technology. If you are really interested, just wait for a while before the next technology hits the market.

LCDs are available in various styles and finishes. Judge the one you plan to buy thoroughly as it will be adding a lot of texture to your room. Mostly people wall-mount their LCDs but if you plan to place it on a cabinet, take a look at the stand that comes along with it.

Check how many devices you can connect to the TV—like the number of HDMI ports that the TV has. The more, the better. Also check the viewing angle of the TV. Many older versions that are available on discounts might have a narrow viewing angle and the picture might appear distorted or colourless beyond a certain angle.

Usually, when you go to a retail store and watch the content playing on the TV, it is a company-made show running on the screen. Ask the dealer to let you watch standard channels from satellite or cable TV so that you are better able to judge the clarity. Look for the channel logo that appears in a corner of the screen. The sharper, the better.

Check for the grains that appear on the screen while watching the content. These should be as few as possible. Especially when playing an HD content, these should be non-existent. In a retail store, with all the TV screens playing the same content side by side, you will be in a much better position to compare various models.

Finally, once you decide to buy a particular TV, enquire about the wires and cables that will come along with it and also the installation charges. ●
