

```
Label1.caption= Create Folder, OLE1 =
Folder_gen.bat
Label2.caption=Hide, OLE2= Hide.bat
Label3.caption=Show, OLE3= Show.bat
Label4.caption=Lock, OLE4= Lock.bat
Label5.caption=Unlock, OLE5= Unlock.
bat
```

6. Insert two command buttons in Form 1.

```
Command1.caption= Enter Password
Command2.caption= Exit
```

7. Save the project and create executable file 'project1.exe'

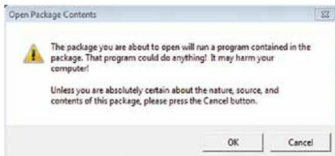

Program operation

When you run the 'project1.exe' executable VB code, a window will open up with two buttons—'Enter Password' and 'Exit' as shown in Screenshot 2.

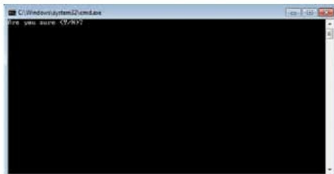

On clicking the 'Enter Password' button, an input box opens up where the password set by you is to be entered. If the password matches 'xyz123' then three frames become visible, which contain the OLE objects.

Screenshot 3 shows the program output after entering correct password. Double-clicking the OLE objects executes the commands in the batch files as explained below.

Create folder option. In this option, clicking on the red button will create a folder named 'Hider', which can be found at 'c:\Hider' or can be reconfigured by editing the path in the 'Folder_gen.bat' batch file. You can create your personal folder under the 'Hider' folder. You can also copy

Screenshot 4: Windows security warning

Screenshot 5: 'CMD.exe' window asking permission to continue

the existing files and folders in the 'Hider' folder. Note that on executing the OLE file (Folder_gen), a security warning pops up (Refer Screenshot 4). You don't have to worry about the warning message; you can safely click on the 'OK' button, allowing the batch file to execute.

Hide and unhide folder options. Clicking on 'Hide' button hides the 'Hider' folder created in the previous step by changing its attributes. Normally this folder is not visible even after enabling the 'View hidden files and

folders' option in Windows Explorer. The 'Unhide' option removes these attributes and makes the 'Hider' folder visible.

Lock and unlock folder options. The 'Lock' command locks the 'Hider' folder and denies permission to open or manipulate it. The locked folder cannot be deleted, ensuring the safety of the contents within it. Use 'Unlock' command to unlock the folder.

On executing 'Lock' command, another window pops up asking permission to continue (Refer Screenshot 5). Enter 'y' if you wish to continue or 'n' if you wish to discontinue running the commands. After entering 'y', try clicking on the folder you created and it will deny any manipulations being tried on it.

BATCH FILES

```
Folder_gen.bat:
@echo off
cd\
md hider
```

```
Hide.bat:
@echo off
cd\
```

```
attrib hider +r +a +s +h
```

```
Unhide.bat:
@echo off
cd\
attrib hider -r -a -s -h
Lock.bat:
```

```
@echo off
cd\
cacls hider /d users
```

```
Unlock.bat:
@echo off
cd\
cacls hider /g users:f
```

FORM1 VB CODE

```
Dim a As String
Private Sub Command1_Click()
