

e-health innovations get a boost

Hospitals across India could be on the brink of finding a solution to closing the gap between the quality of healthcare between city dwellers and those residing in India's villages. Telemedicine, an umbrella term for new technology and techniques that facilitates healthcare diagnosis and treatment remotely, is being hailed by the industry as an answer to ensuring that India's poorer classes have access to the best healthcare possible.

In a bid to modernise India's telemedicine industry and improve the standard of care for the country's rural inhabitants, some Indian hospitals are now looking to introduce electronic health records (EHRs). These digital records facilitate information exchange between geographical locations, supporting medical professionals in rural areas. Doctors are provided with patient data (including past history) from electronic medical records (EMR) and up-to-date medical knowledge and literature, to help them make an accurate diagnosis.

A big boost has come with the Technology Development Board under the Ministry of Science & Technology, government of India, sanctioning 269 billion rupees for e-health and mobile initiatives.

Special renewable energy zones on the radar

In an attempt to bring down the cost of renewable energy (RE) systems, India is working on a comprehensive plan for creating special renewable energy zones, said Farooq Abdullah, minister for new and renewable energy, at the foundation day ceremony of The Energy and Resources Institute (TERI).

Abdullah said, "As a result of efforts made during the past two decades, significant infrastructure has emerged for the manufacture of different renewable energy systems. To leverage the expertise that the country has developed in the field over the years, India can establish itself as a hub for manufacturing renewable energy systems, devices and their components."
