

Moxa Compact Modular Managed Switches

Get Nanosecond-Accurate IEEE 1588 For Your Network Synchronization

- Hardware-based IEEE 1588 v2 PTP
- Time precision within 100 ns
- Hot swappable modular design
- Power and network redundancy
- -40 to 75°C operating temperature

Nanosecond Accuracy for Guaranteed Network Synchronization

Moxa's EDS-600 series modular managed Ethernet switches offer IEEE 1588 PTP (precision time protocol) modules for clock synchronization among networked devices with accuracy down to the nanosecond level. Using IEEE 1588 hardware timestamps, the PTP switch module eliminates time errors in packet transfers, and delivers ultra-precise time synchronization between the grandmaster and subordinate devices over the network. The highly accurate master/slave synchronization hierarchy is indispensable for meeting the critical requirements of test and measurement, automation process, and data collection system applications.

EDS-608/611/616/619 Series
Compact Modular Managed Ethernet Switches

CM-600-4TX-PTP 4-port IEEE 1588 module

- IEEE 1588 v2 hardware timestamp support
- Configurable boundary/transparent clocks
- Support edge-to-edge or peer-to-peer mode
- Easy-to-use web configuration

Hot-swappable
IEEE 1588 PTP
Module
