Tejas Networks wins innovative telecom product award

Tejas Networks' packet optical transport (POTP) product, TJ1600, has won the *Aegis Graham Bell Innovative Telecom Product Award 2011*. Aegis Graham Bell Awards are intended to promote innovation in the field of Time (telecom, Internet, media and entertainment) and to provide recognition for outstanding contributions.

"This prestigious award validates our approach of developing an innovative packet optical transmission platform that puts operators at a competitive advantage in the new mobile broadband era. Our innovative Future Ready transmission products enable our customers to cost-effectively scale their networks to meet the spiralling data growth, while continuing to profitably serve their existing base of voice and leased-line customers. In India, leading operators like Airtel, Aircel and other leading 3G operators have installed TJ1600 successfully and we are addressing over 250 million subscribers," said Sanjay Nayak, CEO and MD.

Reliance Communications CEO named Ernst & Young Entrepreneur Of The Year

Mike Narula, founder, president and chief executive officer of Reliance Communications, has received the *Ernst & Young Entrepreneur Of The Year 2011* New York award in the business services category. The award recognises outstanding entrepreneurs who demonstrate excellence and extraordinary success in such areas as innovation, financial performance and personal commitment to their businesses and communities.

complex IC, package and PCB design challenges the design community faces in today's competitive market," said Jaswinder Ahuja, corporate vice president and managing director, Cadence Design Systems (India). "Through this new partnership, Cadence will leverage FTD's extensive local network and customer portfolio and its rich experience in training and services."

MoMagic partners with MediaTek

To cater to the ever-increasing demands of mobile value-added services (VAS) in the Indian market, MoMagic Technologies, a young mobile VAS company in India, has announced a strategic partnership with MediaTek, a leading fabless semiconductor company for wireless communications and digital multimedia solutions.

MoMagic plans to offer innovative solutions using different mobile connectivity media of SMS, USSD, voice, WAP, 3G and mobile applications. To enable the huge VAS market of non-Java feature phones, MediaTek's middleware technology, Maui Runtime Environment (MRE), will allow traditional feature phones to download and run applications like a smartphone does. With investments in MoMagic,

MediaTek aims to accelerate the speed to market and reduce deployment cost for the whole ecosystem including local brands, content providers and operators.

Freescale tops networking processors market

Freescale Semiconductor is the market leader in wired and wireless communications processors, according to analyst firm Gartner. With 53 per cent of the market in 2010, Freescale is ahead of its closest competitor by more than 40 per cent.

Freescale continues to maintain its strength in communications processors, growing market share year over year from 2009 to 2010. The industry's rapid adoption of Freescale's multicore QorIQ products played a key role in the leadership expansion.

In a recent development, the company has opened an R&D centre in Hyderabad, to drive innovation and development of solutions for its primary networking portfolios. Activity at the new facility is expected to deliver solutions that enhance Freescale's QorIQ and the new AMP platform for applications including data centre, security ap-

pliances, mobile wireless infrastructure and small business networking among other leading-edge technologies.

element14 doubles its semiconductor portfolio in Asia Pacific

element14, part of the Premier Farnell group, has expanded its distribution partnerships with global semiconductor leaders to double in Asia Pacific the semiconductor components portfolio of its inventory of 130,000 electronic products. It now claims to stock the broadest range of semiconductor integrated circuits in Asia Pacific from leading semiconductor specialists like Texas Instruments, Analog Devices, National Semiconductor, STMicroelectronics, Microchip and Freescale Semiconductor.

Under a recent global distribution agreement, Micrium, a leading supplier of embedded RTOS solutions for the global engineering community, will extend its product and marketing support to element14, and collaborate on new product information via the element14 node (KNOWledge for Design Engineers) – the revolutionary online design platform that is exclusively focused on the needs of electronic design engineers.

Electrolube launches a new microsite

In order to enhance customer relations, advanced electro-chemicals manufacturer Electrolube has launched a new microsite concentrating on contact lubricants in detail.

Electrolube's marketing manager, Karen Harrison, said, "The Electrolube
