

website is already filled with information, detail and guidance for both existing and potential customers, but we wanted to extend the service we provide. By introducing microsites which concentrate on specific product areas and processes, customers can get a real insight into what is best for them and their requirements. There is also detailed technical information on the site to ensure customers make the right decision in choosing the most suitable product for the job."

Digi-Key to sell Everlight products

Electronic components distributor Digi-Key Corporation and Everlight Electronics have inked a global distribution agreement. Everlight Electronics manufactures through-hole and surface-mounted LEDs, optical sensors and infrared components, and state-of-the-art lighting fixtures and digital LED displays.

"Our customers expect worldwide availability and support for our products. We are convinced that Digi-Key is a strong partner for the broadening of our sales channels. Digi-Key's position as a premier online catalogue and e-commerce distributor allows both Everlight and Digi-Key the opportunity to serve an expanding global customer base," said Bernd Kammerer, general manager of sales and marketing, Everlight Electronics.

Everlight's lighting solutions are now available for purchase on Digi-Key's global websites.

ICOMM 2011 and AEF 2011 conclude successfully

The 6th CMAI India International Communications Fair (ICOMM 2011) and 7th Asia Electronics Forum (AEF 2011) were held recently at NSIC Expo Grounds, Okhla, New Delhi.

ICOMM 2011, targeted at boosting the localised production, strategic tie-ups and technology promotion for telecom trade in India, saw more than 60 exhibitors from various fields of telecom and communications technol-

First solar energy plant inaugurated in MP

Rameshwar Thakur, governor of Madhya Pradesh, recently inaugurated the state's first solar energy plant at Raj Bhawan. The plant has a 20kW installed capacity. Speaking on the occasion, Thakur said, "India is moving ahead in the generation of non-conventional energy. To overcome the adverse effects of global warming, we need to make constant efforts for research in the field of sustainable and green energy."

Microsoft opens new R&D facility in Bengaluru

Microsoft has set up a new state-of-the-art R&D facility in Bengaluru that will house both the Microsoft India Development Center (MSIDC) team that contributes to Microsoft Corp's adCenter technologies, as well as the researchers from Microsoft Research India. Microsoft's first R&D centre was set up in Hyderabad in 1998.

"Bengaluru has been our home ever since we established the Microsoft Research India lab, and moving to the new, larger lab space is indicative of the increasing interest in research in the country," said P. Anandan, distinguished scientist and managing director, Microsoft Research India.

NI donates design tools to MIT

National Instruments (NI) is donating its design tools to the Massachusetts Institute of Technology (MIT) in order to help expand the use of NI software and hardware in the MIT Department of Mechanical Engineering via ten mechatronics, robotics, manufacturing, control and design courses over the next five years.

"Use of state-of-the-art NI tools enhances the classroom experience and reinforces student learning at multiple points in the curriculum," said Professor Mary Cunningham Boyce, head of the MIT Department of Mechanical Engineering. "The NI tools also help accelerate the department's research into new areas, such as agile biomimetic robotics, high-speed imaging at the nanoscale and precision motion control."

Google to buy Motorola Mobility

Search giant Google plans to acquire Motorola Mobility for about \$12.5 billion in cash, in a bid to boost the competitiveness of its Android smartphone operating system. The deal will give the company access to Motorola's more than 17,000 patents related to wireless technology. This may help it fend off legal challenges from competitors such as Apple and Microsoft.

ogy representing countries like China, Taiwan, Hong Kong, Japan, Korea and India. The 7th AEF that also began with ICOMM 2011, the two-day exhibition-cum-B2B event, also had leading international trade representatives.

The show witnessed the launch of Indo-Global Digital Devices Association, jointly by India, China, Taiwan, Hong Kong and Japan for promotion of mobile devices in India. This association will help facilitate foreign direct investments and strategic tie-ups in the Indian market.

Renesas selects Wind River FAST for Android software testing

Renesas Electronics Corporation, an advanced semiconductor solutions provider, will use Wind River Framework for Automated Software Testing

(FAST) to test Renesas Electronics' Cortex-A9-based system-on-chip (SoC) platform for Android-based smartphones and consumer products. Wind River FAST for Android is a fully automated software testing solution that assists silicon vendors, device manufacturers and mobile operators in improving the software quality of their Android implementations and test performance, compliance and device user interface and user experience.

In another development, Renesas Electronics will transfer its high-power amplifier business and its manufacturing site, the Nagano Device Division (Komoro, Nagano) of Renesas Eastern Japan Semiconductor, to passive electronic components supplier Murata Manufacturing. This business transfer is scheduled to be completed by January 1, 2012.
