

Optical vortex converter

of medical imaging.

The team led by Professor Peter Kazansky at the University's Optoelectronics Research Centre used nano-structures to develop monolithic glass space-variant polarisation converters. These millimetre-sized devices change the way light travels through glass, generating 'whirlpools' of light that can then be read in much the same way as data in optical fibres.

This enables more precise laser material processing, optical manipulation of atom-sized objects, ultra-high resolution imaging and table-top particle accelerators. Information can be written, wiped and rewritten into the molecular structure of the glass using a laser.

According to the researchers, at sufficient intensities, ultra-short laser pulses can be used to imprint tiny dots (like 3D pixels) called 'voxels' in glass.

Oscilloscope cum spectrum analyser

Tektronix claims to have introduced the world's first mixed-domain oscilloscope (MDO) that delivers the functionality of an oscilloscope and a spectrum analyser in a single

Tektronix mixed-domain oscilloscope

instrument. The MDO4000 gives engineers the ability to capture time-correlated analogue, digital and RF signals for a complete system view, helping them to rapidly solve complicated design issues.

The RF input frequency range extends up to 6 GHz and provides a capture bandwidth of 1 GHz or higher at all centre frequencies—a hundred times wider than typical spectrum analysers. Users can even see up to four decoded serial and/or parallel buses at one time on the same display. Due to this time correlation between domains, engineers can now make accurate timing measurements to understand delays and latencies between command/control events in their design and changes in the RF spectrum.

CAUTION NOTICE

Notice is hereby given to all concerned including the Manufacturers, Merchants and Traders dealing inter alia with "LED Aviation Obstruction Lighting Device" Our client, Kumar Krishna Rohatgi of Binay Opto Electronics Private Ltd. is the Patentee of Indian Patent No. 188995 of 9th May 1996 relating to "LED Aviation Obstruction Lighting Device". Therefore, it would not be lawful for any person without the written consent, of our client, to indulge in any act of MAKING, PURCHASING, USING (AS END-USER/CUSTOMER), OFFERING FOR SALE, SELLING OR IMPORTING such device in India during the subsistence of this patent.

It is further made known to all concerned that any unlawful act by any person would not be acceptable to our client, who may decide to take legal action against the infringers for such wrongful act in a Court of Law.

All concerned in the Trade and Commerce and hereby requested to contact the undermentioned address or any further details regarding the above and to avoid unnecessary litigation and/or legal proceedings.

Kolkata-700 017

BINAY PowerLED

**Dome Type
High Bay Light**

**Saves Money
Saves Energy
Better, Clearer, Spectrally Enhanced Light
Designed for Long and Reliable System Lifetime**

BINAY's PowerLED Dome Type High Bay Luminaires are a one-to-one replacement for existing HID High Bay Luminaires, and offer low power consumption and a maintenance-free long life in an economical form factor

- Saves 65-70% power consumption over Metal Halide or HPSV
- Life of 10 to 15 years eliminates regular bulb and ballast replacement costs
- Instant turn-on to full brightness
- Full spectrum white light provides greater clarity and visual acuity; improves visibility and safety
