

Looking for suppliers of components or products?

Searching for contact details of electronics manufacturers?

Searching for leading electronics associations of India?

Searching for brands?

India's Leading Electronics Yellow Pages

YELLOW PAGES WITH OVER 2,500 PRODUCT CATEGORIES

SOURCING OPTIONS FOR BUYERS OF ELECTRONICS PRODUCTS

7,000 ORGANISATIONS TO CHOOSE FROM

LIST OF IMPORTANT ELECTRONICS ASSOCIATIONS OF INDIA

Electronics For You Yellow Pages 2011-12 (Summer Edition)

From electronics products to companies, complete company details to key industry segments, for any and every vital information on the electronics industry, turn to the Yellow Pages of the electronics industry.

only for ₹ 500/-

NOW ON SALE!!

Fill in the photocopy of this form and send it to:

EFY Enterprises Pvt Ltd

D-87/1, Okhla Industrial Area, Phase 1, New Delhi 110 020;
Ph: 011-26810601, E-mail: info@efyindia.com;

ORDER FORM

Name _____

Mailing Address _____

State _____ City _____ Pin Code _____

Phone _____ Please find enclosed a sum of Rs _____ by _____

DD/MQ/crossed cheque* bearing the No. _____ drawn on (bank) _____

in favour of EFY Enterprises Pvt Ltd, payable

at Delhi (** Please add Rs 50 for non-metro cheques)

For bulk orders: IBH Books & Magazines Distributors Pvt Ltd

trolled by a 12-watt motor which rolls out paper soon after the camera captures the image. The tube rolls out the scanned document from the platform and the next document is ready before the camera.

"In other large-size document scanners there is no provision for sheet-feeding. Here, the papers are fed onto the platform with the roller," Thite reveals. The next cycle begins as the camera clicks an image of the new document.

For transferring photographs to the computer system, Thite used the camera's software. After transferring the images to computer, text can be extracted by using an optical character recognition (OCR) software.

Challenges that Thite faced

Time synchronisation between the camera, solenoid and roller is one of the essential elements of this digital scanner. Thite bought timer circuits and integrated a time sequence that matched the process into it. The timers have been set such that there is a three-second gap between the camera-click and the roller movement. This time interval gives the camera enough time to charge its flash.

"I have used three timers—for the camera to click, for the motor that rolls the paper out and for the time interval that stands between the two. At first, the roller moved the paper too fast and the camera was not given enough time to click the image. I tried different time configurations and finally found the required time interval, i.e., three seconds," Thite explains.

Another area that required improvisation was the camera-click. "I first used a motor for the click mechanism but the speed of the click was low. I then decided to try a magnetic push-pull solenoid and found that it works well," Thite explains.

The cost factor

Already available large document scanners will cost you at least Rs 200,000. "If you look at my final prototype, I have spent about Rs 3000 on the attachment by using standard parts available in the market and other components. I fitted the attachment to a digital camera that cost around Rs 7000. So the total attachment cost me about Rs 10,000," Thite reveals. However, he intends to use more advanced components in the final product.

What lies ahead

Thite is working on a saleable model of the scanner that can be used in libraries and by architects. "I am also looking for investors who can take this innovation forward and push it to the market," Thite concludes. ●
