

DIGITAL POWER MODULE EASIER, SMARTER DESIGNS

Introducing the ZL9101M, the Industry's First Fully-Encapsulated Digital Power Module

Simplify your design and replace up to 80 external components with one compact "pick and place" module. The ZL9101M's digital architecture supports feature selection and system monitoring via the industry standard PMBus interface. Configuration is as simple as "point and click" with the PowerNavigator™ graphical user interface.

"Pick and place" manufacturing with "point and click" configurability... now that's power made simple.

There's Nothing but Blue Skies When Designing With the Space-Saving ZL9101M

- Replaces up to 80 external components, including system management ICs
- 15 mm x 15 mm package
- Very high power density
- Low thermal resistance
- 12A output current and easily paralleled for higher current
- Wide input and output voltage ranges
- Easy configurability and monitoring with the PowerNavigator™ GUI
