THINNEST BLACKBERRY

RIM'S BLACKBERRY BOLD 9900 IS JUST 10MM THIN AND POWERED BY THE NEXT-GENERATION BLACKBERRY 7 OPERATING SYSTEM

Research In Motion (RIM) has introduced its thinnest BlackBerry smartphone ever—BlackBerry Bold 9900.

Powered by the next-generation BlackBerry 7 operating system, the smartphone has a tactile keyboard with a touch display and is crafted with brushed stainless steel frame. The BlackBerry Bold 9900 features a 1.2GHz processor, HD video recording, 24-bit high-resolution graphics and advanced sensors enabling new augmented reality applications such as Wikitude that can be integrated with BlackBerry Messenger 6.

The 10mm thin smartphone is the first BlackBerry with inbuilt support for near-field communications—a technology that enables pairing of accessories or reading SmartPoster tags with a simple tap of the smartphone.

Enjoy 7 – ₹ 12,999**

experience including an interactive, customisable home screen with moveable widgets, notifications and tabbed browsing.

ULTRA-THIN NETBOOK

ASUS X101 WEIGHS LESS THAN 1 KG

ASUS has introduced what it claims to be the world's thinnest and lightest netbook—X101. The 1.8cm thin netbook runs on Intel's MeeGo operating system, is powered by the Intel Atom N455 processor and has a 25.6cm (10.1-inch) LED-backlit monitor. It weighs less than 1 kg and does not require any anti-virus as security issues are pre-resolved.

This Bluetooth 3.0-enabled netbook comes with a Chiclet keyboard and super hybrid engine, which is ASUS' unique power optimisation technology to optimise the system performance and battery life.
